Need & Necessity

Successful animal husbandry hinges on the well-being of your cows, particularly during the critical postpartum phase. The birth of healthy and active calves is key to your profitability, and the key to their well-being is proper calcium intake. After calving, the mother cow's calcium reserves deplete significantly, leading to increased calcium demands. Standard cattle feed and supplements alone won't suffice to meet these demands. That's where FS Calcival, a chelated organic calcium supplement, steps in.

Unlocking the Energy of Calcium

Calcium is a vital component for the well-being of all living beings, and maintaining its levels is crucial. In essence, calcium can be described as energy, and we've harnessed this energy to create F. S. Calcival.

What is F. S. Calcival?

F. S. Calcival is not just calcium; it's more effective, more powerful. While regular calcium supplements can boost energy levels in animals, F. S. Calcival goes above and beyond. It is a multi-vitamin and calcium formulation that not only enhances energy but also bolsters immunity in animals. For dairy cattle (cows, buffalo, and goats), it plays a pivotal role in increasing milk production.

Why Choose F. S. Calcival?

Rapidly addresses postpartum calcium needs, preventing milk fever.

Boosts calcium levels in both cows and their calves.

Supports future milk production and reproductive performance.

Enhanced Milk Production :

F. S. Calcival improves milk production and quality, benefiting both dairy farmers and consumers. It also maintains the S. N. F. (Solids-Not-Fat) level in milk.

Stronger Bones and Muscles :

The calcium component supports bone and muscle health, reducing the risk of bone-related issues and promoting longevity in cattle.

Optimized Nutrient Absorption :

The multivitamins in F. S. Calcival enhance metabolic processes, leading to better nutrient absorption and improved overall cattle health.

Cost Savings :

Better overall cattle health means significant savings on medical visits and treatments, making F. S. Calcival a smart investment.

Scientifically Proven Results

while traditional calcium supplements can lead to issues like weight loss and irregular heat cycles in cattle, F. S. Calcival stands apart. Our formulation contains not only calcium but also essential multivitamins, herbs, and minerals, negating any adverse effects. Cattle fed with F. S. Calcival experience increased food intake initially, leading to higher milk production in both quantity and quality. Within 10–20 days, you'll see promising results.

Economic Advantage with F. S. Calcival

Imagine you own a cow producing 5.5 liters of milk at Rs 34 per liter. By using F. S. Calcival, you can expect

Increased Milk Production

A rise to 6.5 liters in 10–15 days, resulting in an extra 30 liters per month, equating to a profit of at least Rs 1,020.

Higher Fat Content

An increase in the fat content means your milk is valued more at the dairy, adding at least Rs 480 per month to your profit.

Improved SNF Levels

F. S. Calcival ensures your milk meets the dairy's standards even during the summer months, potentially earning you up to Rs 4,488 in additional profit. In summary, a minimal investment in F. S. Calcival can yield a monthly profit of at least Rs 1,500, and in the summer, you could enjoy a profit of up to Rs 5,988.

Choose
F S Calcival, the
trusted solution
that eases the
stress of farmers
and ensures the
health and
productivity of
your cattle.

Invest in the
well-being of
your herd and
reap the rewards
of a successful
animal husbandry
operation.

Dosage Pattern of F. S. Calcival

For Progenated Animals :

Give 50ml doses, morning and evening, with cattle feed from one week after delivery until 5 months. Consult a doctor after 5 months.

For Pregnant Animals :

Feed 20 to 40ml of F. S. Calcival daily as per the doctor's advice to boost overall health, calf health, and heat cycle regulation.

Your Livestock Deserves the Best

F. S. Calcival is more than a calcium supplement; it's a game-changer for livestock. Invest in their health, and watch your profits and production soar. Consult your local animal doctor for personalized advice and get ready to witness the difference with F. S. Calcival
